

Cut out the car. Using a craft knife, cut out the white indicated area at the bottom of the car. Except for the two folds indicated on the print out, you'll be making all of your folds along the dotted lines. Where the windshield meets the front of the car, make that fold towards you. Where the bottom of the car meets the bumper of the car, make that fold away from you. Make the rest of the folds (eight) on the car away from you. Fold the 19 white tabs away from you. Start by adding glue to the white tabs on the left backside of the car. Following the contours of the car, attach those tabs to the left side of the car. Repeat on the right side. Next, glue the white tabs on the hood of the car to the left side of the car, following the car's contours. Repeat on the right side. Glue the three tabs that run along the bottom of the car to the bottom piece, making sure you follow the contours of the bottom piece. Your car is complete!
